

8890X series
Infrared High Speed Dome Camera
(Fourth-generation / IV)
Operating manual

Version: V2.0

copyright statement

This copyright belongs to our company. Without permission, any units or individuals shall not in any form or any means to copy or plagiarize part or the whole of the book content.

Our company follows the strategy of sustainable development. Therefore, the company keeps the right to modify and improve any products described in this specification under the condition of the no notice in advance .

Safety Caution

1. Before using the camera, please read the attached manual carefully to ensure the correct operation.
2. Wall installation power supply box is with dangerous high voltage, and there is no any replaceable parts, Laypeople please don't open shielding cover. When wiring, must abide by the electrical safety standards, please don't choose other power adapter to supply electricity to the camera.
3. The camera video signal cable and RS-485 wiring mouth of control line used ceramic gas discharge tube, TVS tube instant discharge lightning technology, which can prevent the lightning under 500W power, surge and other kinds of pulse of high voltage to damage the interior of the camera.
4. In order to protect the camera not to be damaged by lightning stroke, please use marked the ground wire ports of preventing lightning plate to access the earth. If no, lightning protection performance will be greatly reduced.
5. The interior of the camera has high precision structural element, please transport properly. Please do not leave the camera on the unstable desk or scaffolds to test, insure installation is firm before operation.
6. The camera video signal cable and RS485 control line must be far from high voltage lines as possible, to avoid touch lines.
7. no matter not in use or be in use, prohibit putting the camera aiming at the sun or other high light objects. If no, it will cause permanent damage of the CCD in camera interior.
8. When the camera malfunction, with reference to the manual to find fault, if can not find out the fault cause , contact professional maintenance persons to maintain. About relevant maintenance work, that must be maintained by maintenance persons who authorized by our company.

1. Installation and debugging of Infrared High Speed Dome Camera
1.1. Infrared high-speed component name

Frontal outline drawing

1.2. Installing hole size figure

1.3. Installation and debugging

1.3.1. Take out the main dome, wall bracket, wall boxing and other components.

1.3.2. Affix the wall boxing to the wall, according to the wall boxing size to drill corresponding hole, then install the expansion bolts.

1.3.3. Connect the main dome with the wall bracket, and tighten the positioning screws.

1.3.4. Hang the wall bracket on the rotation door.

1.3.5. Plug the cable row into the socket signed "TO DOME" on the right of prevent lighting plate.

1.3.6. penetrate the video cable and 485 controls thread from waterproof screw, and contact to the corresponding outlet signed "OUTPUT LINE" on the left of prevent lighting plate.

1.3.7. if the distance between the machine and control equipment over 500 meters, connect 485 matching resistor jumpers on the prevent lighting plate to the two pins marked resistance.

1.3.8. The main dome has alarm linkage output function. According to the receiving equipment, toggle switch S1 to choose two states normally open or normally closed.

1.3.9. Finally, tighten the two mounting screws. Access to 220V AC power supply must pay attention to color-coded. (Blue and brown zero line and FireWire, yellow is earth wire)

1.3.10. These are wall mounting bracket installation method. If the choice of lifting brackets, installation is also basically the same.

Video cable, 485controls thread (To control center)

2、infrared high-speed dome camera setting and operation

2.1. technology parameter table

Power Supply	AC220V/50Hz or AC110V/60Hz
Video Output	1.0V p-p 75Ω
Communication	RS485
Dome Address	1-255(Support software rewriting address)
Communication Protocol	Pelco-D/Pelco-P / SANTACHI 650 / FACTORY
Baud Rate	2400/4800/9600/19200 bps
Horizontal Rotation Speed	220°/s (1-64 Grade speed change)
Horizontal Rotation Range	360° unlimited
Vertical Rotation Speed	90°/s
Vertical Rotation Range	0-90°
Manual Control Speed	180°/S
One Machine Set	Compatible with SONY,HITACHI,SAMSUNG,LG,SANYO.CNB etc
Infrared light(Spec x pcs)	LED Array lights x10pcs / Ø5x90pcs
IR Distance	100-120m
Preset Points	220 points
A-B Scan Speed	4 groups(1-64 grade speed available)
Cruise scanning	4 groups(at most 32 preset points each group)
Pattern scanning	4 groups(at most 100 continuous action each group)
Idle Running	After setting idle 5-255S,it scans automatically
Timing of operation	4 groups(can operate at any setted time the whole day)
Privacy protection	Can be set to 8 protected areas
Password protection	Can be set to 6 numbers password
Information Display	Date,time positon,temperature,etc
Alarm Linkage	Support 4ways output,2ways input, colse/open optional
Working Temperature/ Humidity	-40℃ — +60℃ , ≤95% (no condensation)
Automatic thermostat indicator	<-5℃ Heating. >48℃ Cooling
Waterproof	IP65
Dimension	400×380×210mm
Net Weight	7.9kg

2.2. Common Functions Glossary

Preset setup : Save some locations that need to be usually monitored,so that can find these locations easily.

Call preset : To run the machine quickly and accurately to a pre-stored location, or execute a specify function.

Left-right scan setup : Set the machine scan back and forth between two points in a certain area. Also known as A-B Scan.

Cruise setup : Set the machine scan between some preset points, and each preset dwell time between the points can be set freely.

Pattern Setup : record the scanned line and store it into the machine, easy to play back or run the line at any time.

Time action : Set the machine to run a certain function at a specific time.

Wait action : After a period of time without any operation, the ball automatically run to the specified preset point guard, or run a preset function.

Alarm Linkage : When an alarm signal is input, the machine immediately execute pre-configured functions, and can be linked to other output devices.

Power-off memory : When the machine restart after power failure, it will automatically revert to the last stop position or the last working state.

High zoom low speed : with manual zoom lens value increases, the manual control speed in proportion to slow down.

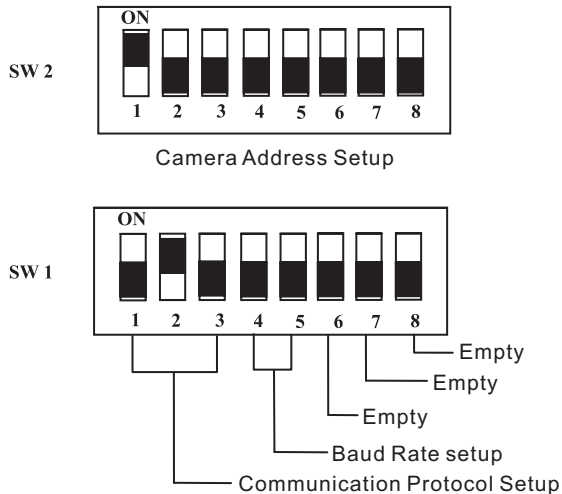

Far and Near conversion : In night mode, far/near-infrared light automatically converted according to the lens multiplier. When the lens multiplier nearly 13 times, the near lights on. When above 13 times, the far light on.

Day/Night conversion : the machine identify the current ambient light through photosensitive Resistance, turn on the infrared lights, and convert black and white images automatically.

Automatic Focus : If the product is set to auto-focus mode, When the user control PTZ, the camera always follow the auto-focus.

2.3. Address, protocol, baud rate setting

After machine installed, be sure the ball machine set DIP switch address code, protocol, baud rate is fully consistent with the control equipment. Our High speed Demo camera default address is 1, communication Protocol Pelco-D, Baud Rate 2400bps. Corresponding DIP switch status is as follows :

If you need to change the protocol setting, please refer to the following diagram to set the DIP :

If you need to change the baud rate setting, please refer to the following diagram to set the DIP :

2.4. Infrared light sensitivity adjustment

DIP board with an adjustable resistor, the user can adjust the sensitivity of the infrared light according to ambient light intensity. As belows :

2.5. Address DIP table (1 means ON, 0 means OFF)

Binary code	Address	Binary code	Address	Binary code	Address	Binary code	Address
10000000	1	01000000	2	11000000	3	00100000	4

2.6 Control equipment

According to users' need, below are the equipments normally used :

Control board

PC (Video capture card)

DVR

tester (specially for project)

Operation instructions: As the specific operation ways are different for Variety of controlling equipments, please refer to the referring manual. IR high speed dome camera advise all users collocate special controlling board, more using convenient. All the operation ways of this manual are taking controlling board operating as example.

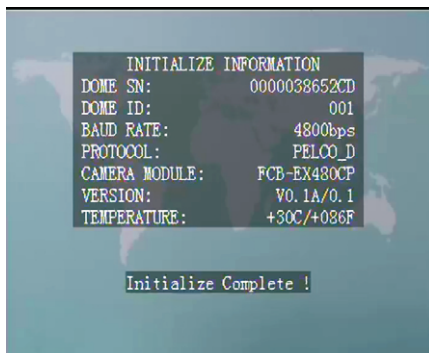

2.7. Boot initialization

Connect the video line and 485 controlling line to the monitor or DVR, ensuring that the connection is right then catch 220V power to the power case of camera.

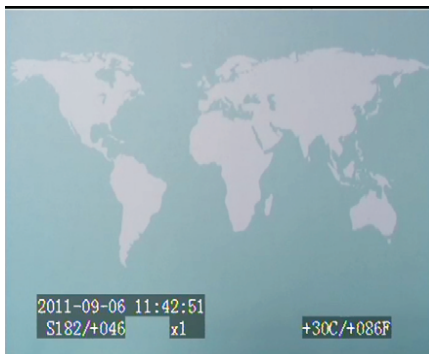

The ir high speed dome camera outpour signal to the screen and start searching varity of collocating information, about after 10 seconds, the screen will show the list of the camera's initialization, as picture 1.

At the mean while, the PTZ starts check up, down, left and right, after checking will show" system initialization success". Then it will standby (picture 2) or get back to the status as the last time off power.

Picture1 checking
information when start up:

Picture 2 standby status:

When at standby status, it will show varieties of operating stuffs' name on the left-up the screen, such as: camera name, preset name, A to B scanning name, cruise scanning name and pattern scanning name. Current date, time, surveillance direction, ptz location, lens multiple, temperature and so on. If no need to show, p.l.s enter the menu<showing information setting> and set:close.

2.8. Basic operation

Frame: select surveillance area. user can operate the rocker up, down, left, right to move the holder to find the surveillance direction. By operating the keyboard "zoom+" or "zoom-", zoom the image. Press "focus+" or "focus-", to adjust lens focus manually.

Set presets: We can set the often monitored location as presets and save in the camera, use number for saving, the camera's maximum quantity of preset is 220. When it shows preset setting successfully, the screen will point out "preset saved". Shown by picture 3:

Picture 3 set preset:

Call presets : run the presetted presets in advance quickly and precisely. And for easy operation, we can call the presets to realize some common use functions. As these calling commands will be occupied by speedy functions, so can't be called solely.

Common function calling preset comparing table:

Call preset	function	explanation
71、72、73、74	Start 1-4 group cruise scan	Start cruise scan
95 or 64	Open main menu	Open camera main menu
98	Start the first group L-R scan	Day and night mode transfer
99	Oblige transerring day-night mode(automatical mode, night mode, day mode)	
101、102、103、104	Start 1-4 group pattern scan	Playback pattern scan

3.< AUTOMATIC OPERATION SETTING >menu operation

Attention:the manual explanation sequences are based on the practicability of camera function, not based on the menu. Please choose the sections you need.

Enter camera main menu:

Under the standby status, call "95", enter the camera main menu. There are 6 groups. As picture 4:

Picture 4 open main menu:

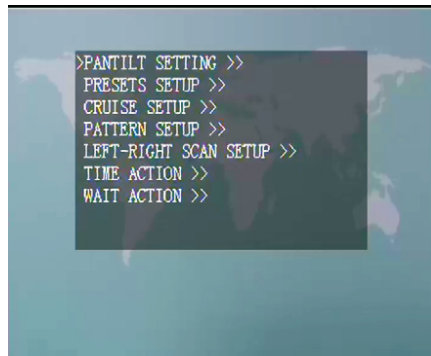

Apply explanation :

1. After entering the menu, cursor flicker position is the current chosen menu item, operate the joystick up and down can move the cursor to choose other items. Press "iris+" or "zoom+", enter submenu, press "iris-" or "zoom-", back to the former menu. If no operation in 60 seconds, then it will quit the menu.
2. Menu back will with ">>", means with submenu, "..." means call the command.

3.1. <PRESET> setting

Move the cursor to <AUTOMATICALLY OPERATE SETTING>, press "iris+" then enter the submenu. Shown as picture 5:

Picture 5 auto run:

Move the cursor to "Presets Setup", press "Iris +" to enter into the submenu. See Picture 6.

Picture 6 preset point setting:

Detail Operation:

1. **Preset Number:** Press "Iris +" to enter and select the preset number, up or down the joystick to select 1-220 preset point number
2. **Title:** Press "Iris +" to enter and edit the title, up or down the joysticks to choose numbers, letters, or characters. Left or right the joystick to move the location or correct the letters. Editing is completed by "Iris +" to save and return;
3. **Set new preset:** Press the "Iris +" to enter into setting preset points state, Pan/Tilt/Zoom to select a desired position, press the "Iris +" to determine the location, the system will prompt "edit preset title". if no need the title, press "iris +" to exit and return;
4. **Show Next preset:** When you press "Iris +", the camera will immediately run to the next preset position, then you can modify the preset point. If the next preset point is not set, it will prompt "the preset is not set";
5. **Delete Current Preset Point:** press "Iris +" to delete the current preset point

Application explain:

1. Setting preset point also can be in standby state, just change to set preset point mode, then type setting preset point Numbers, confirm, the system can display "preset point has save".
2. About Numbers and name of the preset is different . Numbers is the only identity number for camera storage , name is to set by the user.

3.2. <LEFT-RIGHT SCAN> setting

Move the cursor to the <LEFT-RIGHT SCAN >, press " IRIS +" to enter submenu. See Picture 7:

Picture7<LEFT-RIGHT
SCAN> setting:

**Operation:**

1. **LEFT-RIGHT SCAN Number:** press "IRIS +" to enter and choose scan number, control lever up and down to choose scan number group 1-4.
2. **Title setting:** press "IRIS +" to edit title, control lever up and down to choose number, letter and other characters. left and right to edit position and modify characters, press "IRIS +" to save after edit then return.
3. **Set start:** press "IRIS +" to set scan start, move PTZ to choose the start on the left, press "IRIS +" again to confirm and return.
4. **Set stop:** press "IRIS +" to set scan stop, move PTZ to choose the stop on the right, press "IRIS +" again to confirm and return.
5. **Set scan speed:** press "IRIS +" to set scan speed, control lever up and down to increase and decrease speed number (1-64)
6. **Run continuously:** press "IRIS +" to run current LEFT-RIGHT SCAN.
7. **Delete current:** press "IRIS +" to delete current LEFT-RIGHT SCAN. Quick command of LEFT-RIGHT SCAN: using No.98 preset point, (click "preset" button, then input number "98", click "Enter"), the high speed dome will scan with the speed we have presetted

3.3.<CRUISE SCAN> setting

Move the cursor to the <CRUISE SCAN >, press " IRIS +" to enter submenu. See Picture 8:

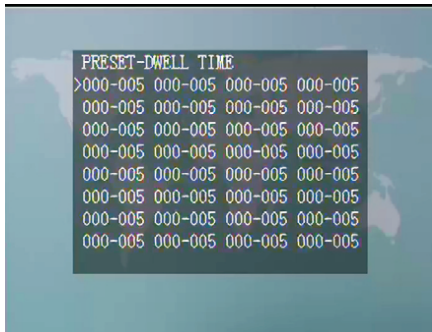

Picture8 < CRUISE
SCAN> setting:

Detail Operation:

- 1. CRUISE SCAN Number:** press "IRIS +" to enter and choose scan number, control lever up and down to choose scan number group 1-4.
- 2. Title setting:** press "IRIS +" to edit title, control lever up and down to choose number, letter and other characters. left and right to edit position and modify characters, press "IRIS +" to save after edit then return.
- 3. DWELL TIME:** press "IRIS +" to set the dwell time of every preset point. the default is 5 seconds. control lever up and down to choose the number of second (1-255), press "IRIS +" to save after edit then return.
- 4. EDIT CRUISE:** press "IRIS +" to enter edit cruise interface. move the cursor to the right "0000" set preset point number 1, control lever up and down to choose one preset point of the number (1-220), move to the right and then selecting "005" set dwell time of the first preset point. control lever up and down to choose second (1-255), every group can up to set 32 preset point, same with other preset points setting. press "IRIS +" to save after edit then return. Picture 9 shows:

Picture9edit cruise scan:

Application Note:

1. List in the order of from left to right, a line move to the next line when it is end;
2. A group cruise can up to 32 preset points position, each position of the preset point can not follow the order of present

- 5. SHOW ONLY ONCE:** press "IRIS +" to start current cruise scan once. the demonstration is over then back automatically.
- 6. RUN CONTINUOUSLY:** press "IRIS +" to run current cruise scan.
- 7. DELETE CONTINUOUSLY:** delete the setted current cruise scan. Quick command of CRUISE SCAN: using No.71-74 preset point to run the group(1-4) cruise scan respectively in the standby mode.

3.4. <PATTERN SCAN> setting

Move the cursor to the <PATTERN SCAN >, press " IRIS +" to enter submenu. See Picture 10:

Picture10<PATTERN SCAN >setting :

Detail Operation:

- 1. PATTERN SCAN Number:** press "IRIS +" to enter and choose scan number, control lever up and down to choose scan number group 1-4.
 - 2. Title setting:** press "IRIS +" to edit title, control lever up and down to choose number, letter and other characters. left and right to edit position and modify characters, press "IRIS +" to save after edit then return.
 - 3.
